

We would like to offer you a Fantastic upgrade to your existing bells only Security system with a wireless monitoring format known as DIGIAIR®

HIGHER LEVEL OF SECURITY

Your current 'bells only' system is an audible alarm which only makes a noise when triggered. If no one is around to hear the alarm your property could be left vulnerable. With DigiAir® your alarm will always be heard as it is a monitored alarm system which uses radio (GPRS) technology to send a signal to an Alarm Receiving Centre (ARC). The ARC will then call you to carry out a password verification process. If this cannot be completed they will call the Police directly or a nominated keyholder.

WIRELESS SIGNALLING

DigiAir® operates using a multi-network DualCom WorldSIM®, which provides access to all four mobile networks. The unit will transfer to the strongest available network in order to deliver your alarm signal. This offers the best guarantee of radio coverage quadrupling its reliability and your property's security.

SAVE ON PHONE CHARGES

DigiAir® incurs no call costs unlike other telephone line based monitored alarm systems which may be charged each time they are set, unset or activated. In addition, there is no requirement for any dedicated phone line as DigiAir® signals solely via radio (GPRS).

✓ FREE INSTALLATION

✓ FREE HARDWARE

✓ FREE MONITORING CALLS

DIGIAIR® Monitoring starts from just £3.00 (+vat) a week
